

2D ARRAYS SOLUTIONS

Solution 1:

Solution 2:

```
public class Solution {
  public static void main(String[] args) {
    int[][] nums = { {1,4,9},{11,4,3},{2,2,3} };
    int sum = 0;

    //sum of 2nd row elements
    for(int j=0; j<nums[0].length; j++) {
        sum += nums[1][j];
    }

    System.out.println("sum is : " + sum);
}</pre>
```

Solution 3:

```
public class Solution {
   public static void main(String[] args) {
       int row = 2, column = 3;
       int[][] matrix = { {2, 3, 7}, {5, 6, 7} };
       printMatrix(matrix);
       int[][] transpose = new int[column][row];
       for(int i = 0; i<row; i++) {
           for (int j = 0; j < column; j++) {
               transpose[j][i] = matrix[i][j];
       printMatrix(transpose);
  public static void printMatrix(int[][] matrix) {
       System.out.println("The matrix is: ");
       for(int i=0; i<matrix.length; i++) {</pre>
           for (int j=0; j<matrix[0].length; j++) {</pre>
               System.out.print(matrix[i][j] + " ");
           System.out.println();
```
